Check out our JerkyXP Gamer reviews and our JerkyXP Gamer details for more information about subscriptions. Ships all over the world. Which field did you select? Check out our geeky goods subscription for more fun picks! For all the Fans of Dancing with the Stars out there (and I know there are many), this one is for you. This season, in addition to weeks of grueling training, each of the show's competing couples was asked to take an assessment of the Perfectmatch.com Duet Total Compatibility System, which assessed the strengths and weaknesses of each pair in an attempt to predict their final chance of success in the competition. This week I had the opportunity to speak with Dr. Pepper Schwartz, chief relationship expert and founding member of Perfectmatch.com, to get a scoop on the test results and hear her predictions about who might be in danger of elimination and who she thinks might dance her way to the finish line. WD: Tell us about the test. What does that mean? Dr. S: This is a fast, online test consisting of a series of real and false questions. We test eight general personality traits, and there are six or seven questions per trait. Each of these questions concerns a different aspect of this general characteristic. WD: So what are the personality factors that are taken into account? Dr. S: The first four are similarities— traits that should be similar in humans if they are to work well together. These include taking risks compared to risk averse, being a type-A personality compared to a Type B personality, being cautious compared to being optimistic, and being open to diversity compared to being prone to predictability. The next four are complementary traits, which means they work well when there is a difference between the two. These are among the flexibility compared to structure, being dominant in relation to cooperation, being passionate and expressive compared to cool and collected, and being compared to introverts. WD: Can you tell us about your experiences with Dancing with the Stars? Dr. S: Basically I got each player to fill out my profile and then analyzed the results. I was asked to predict who would win and who was least likely to win. The predictions are based solely on compatibility, not talent, because you were not allowed to see them dance! WD: Now for some fun! Who do you think is the least compatible pair? Dr. S: Adam Corolla and his partner, Julianne Hough, have a difficult pairing because they are different in three of the four similarities. Additionally, on their complementary qualities, the results showed that Julianne is a perfectionist and really needs a more dominant partner, while Adam is more laid back and less likely to take things seriously. She is also disadvantaged, being both a young [editor note: Julianne is 19] and an introvert, and I think she can overwhelm her with his extroversion. The second I thought looked very bad was Marissa Jaret Winokur and Tony Dovolani. Marissa is a very strong, powerful type of personality — a very perfectionist, very dominant, but also an introvert who does not allow all this to spend time. Tony is more flexible and calm, but he is also very dominant. I think this could lead to a power struggle. WD: Based on the compatibility results, who do you think will win? Dr. S: I think Kristi Yamaguchi and Mark Ballas will do it! These two are really well matched; they are completely similar where they must be and balance well on the basis of complementary characteristics. WD: I think we'll have to wait and see! Are there any other connections that we should keep an eye on? Dr. S: I think a really interesting and potentially explosive match is Jason Taylor and Edyta Śliwińska. They are completely synchronized with the characteristics of similarity, and on the complementary characteristics is more dominant, and she is more of a collaborator. However, they are both introverts with very intense, passionate personalities, which can make some fiery performances! Heidi Cho Want to see how your personality compares with the stars and dancers in the show? Take the quiz here! Which pair do you think will win in Dancing with the Stars this season? Video games can actually add a lot of value to your life, but a few days you really just want to fire it up and destroy all your friends — at all costs. Here's how to cheat in online video games. Many of us at Lifehacker are great video gamers. Our highly regarded editor-in-chief, however, is... Read moreThat cheating is bad. In fact, cheating in online video online often you can ban you and account closed, not to mention that it is just annoying. But if you're just playing against your friends and want to draw a harmless joke, or you're tired of leveling up your WoW character and want to do it quickly, cheating can start looking a bit more appealing. There are more games and cheats out there than we could ever discuss in one article, but here, we'll give you three examples, of the three most popular online games, how you can manipulate files, use programs, or write simple scripts to give yourself an unfair advantage. Note: Use these and other codes at your own risk. Most online games have anti-cheat software running on their servers that can detect multiple codes and get you banned and accounts closed. You can never cheat on your account you can't live without, and if you have a choice, avoid anti-cheat servers to minimize the possibility of catching. You have been warned. Make Walls Invisible in Counter Strike: SourceCounter-Strike: Source is not the latest game, but it is still an extremely popular game among LAN sites and online via Steam. One of the more popular hacks for Counter-Strike: The source is not as much of a hack as it is a texture pack: by replacing some game files, you can turn all the walls invisible, giving you a leg up on finding enemies before they find you. To perform this hack, simply download the files here and paste them into the Counter-Strike: Source folder (usually in C:\Program Files\Steam\steamapps\yourusername\counter-strike source\cstrike. That's it. When you restart the game, you should see that the walls are invisible and fighting terrorists is easier than taking candies from a child. And since you are simply replacing the files in the system, it is much more unlikely that any chat system will detect you, which is a nice plus. Check out the video above to see it (and some other hacks) in action, and click the link below to learn more. Counter-Strike: Source / -New ~ Update- Undetectable Wallhack (w / No Flash) | Multiplayer HackingAutomatically level your character in World of WarcraftSome games, like World of Warcraft, are popular enough to have entire programs dedicated to cheating. One such program is Lazybot, a program that controls your character for you and levels up while you go and do other things. Its main goal is quite simple: running, detecting enemies and fighting them for you, gaining experience while leaving the game minimized. It can also build your fishing skills, automatically send chat messages back to those who contact you, and even give you a glimpse of the radar to make sure you're not stuck somewhere. It's actually a very fully functional program, and while it's a little riskier to use, it can certainly take pain from grinding hours. Watch the video above to see a quick walkthrough of everything the program can Lazybot Thread Support, Q&A: requests and updates | OwncoreRapid Fire Fire In Modern Warfare 2 Rub the third way to cheat in games is to create simple macros that perform actions faster or better than you can with human fingers. Rapid fire scripts, for example, are very common in first-person shooter games like Modern Warfare 2. With a simple script, you can tell your computer to perform mouse clicks at a very high speed, allowing you to fire more projectiles than usual by clicking the mouse. Most of these scripts use AutoHotkey, a program we've often talked about in terms of productivity. You can find tons of different quick fire scripts online, but here's one example (shown in the video above): It's no secret that we're big fans of autohotkey's simple but powerful scripting language and ... Mire's Macros MW2. CoD4: rapid fire + autohotkey script | YouTubeGoing FurtherThese are just a few simple examples of popular games, but you can customize the same types of cheats to the thud of other games out there, and perform all sorts of other actions. If you want to see more, the best place to find cheats like this is on forums like Multiplayer Game Hacking, Owncore (for MMO), or just google search for a specific game. You are bound to come across a treasure trove of various cheats, tricks, and hacks to get your feet on your competitors. As we mentioned earlier, be careful though — not only isn't it too nice, but it can make you excluded from your favorite game, so don't do anything you'll regret. This post is part of our Evil Week series at Lifehacker, where we look at the dark side of getting things done. Knowing evil means being able to overcome it, so you can use your sinister powers for good. Want more? Check out our bad week tag page. Page.
